

Jovia Product Experience Design - Phase 2

1. Complete User Journeys

Jovia's user journeys are designed to be frictionless, AI-assisted, and focused on maximizing productivity. Each journey follows the core principle of "minimizing clicks and maximizing results."

1.1 Job Seeker Journey: “From Visitor to Hired”

Stage	Action	AI Assistance	Outcome
Discovery	Visitor arrives at landing page and explores value proposition.	Personalized highlights based on visitor context.	User decides to register.
Onboarding	User registers and chooses “Job Seeker” role.	AI Welcome Wizard guides profile setup.	Account created and verified.
Profile Setup	User uploads an existing resume or uses the builder.	AI Resume Parser extracts data; AI Resume Analyzer provides score and suggestions.	Comprehensive profile created with high data quality.
Job Search	User searches for jobs or browses recommendations.	AI Matching Engine calculates compatibility scores; Semantic Search understands intent.	User finds highly relevant job opportunities.
Application	User applies for a job, tailoring their proposal.	AI Writing Assistant helps craft a personalized proposal based on the job description.	High-quality application submitted.
Tracking	User monitors application status in the dashboard.	AI Insights provide updates on recruiter activity and next steps.	User stays informed and engaged.
Interview	User schedules and prepares for interviews.	AI Interview Assistant provides preparation tips and common questions.	User performs well in interviews.

Stage	Action	AI Assistance	Outcome
Hiring	User receives and accepts an offer.	Salary Prediction helps evaluate the offer.	Successful placement and onboarding.

1.2 Employer/Recruiter Journey: “From Job Post to Success”

Stage	Action	AI Assistance	Outcome
Setup	Recruiter creates company profile and verifies identity.	AI Branding Assistant suggests profile improvements.	Verified company profile ready for posting.
Job Creation	Recruiter drafts a job posting.	AI Quality Check ensures the description is clear and optimized for search.	High-quality job posting created.
Publishing	Recruiter publishes the job to the marketplace.	SEO Optimization and multi-channel distribution suggestions.	Job is live and attracting candidates.
Screening	Recruiter reviews incoming applications.	AI Ranking Engine sorts candidates by match score; AI Insights highlight top talent.	Shortlist of qualified candidates identified quickly.
Interviewing	Recruiter schedules and conducts interviews.	Interview Scorecards and automated scheduling tools.	Consistent and objective evaluation of candidates.
Selection	Recruiter makes a hiring decision and sends an offer.	Candidate Intelligence summarizes all evaluation data.	Best candidate selected and offer sent.

1.3 Platform Administrator Journey: “Platform Governance”

- **User/Company Moderation:** Reviewing flagged profiles or job posts using **AI Content Moderation** to identify spam or policy violations.

- **System Optimization:** Monitoring platform performance and AI accuracy through the **Admin Dashboard**.
- **Feature Management:** Controlling feature availability and system-wide settings via **Feature Flags**.

2. Complete Sitemap

The Jovia sitemap is structured to provide clear paths for each user role while maintaining a unified platform architecture.

2.1 Public Pages

- Landing Page
- About Jovia
- Pricing & Plans
- Help Center / FAQ
- Contact Us
- Terms of Service & Privacy Policy

2.2 Shared Application Pages

- Login
- Register (Role Selection)
- Email Verification
- Password Reset
- Notifications Center
- Settings (Account, Security, Privacy, Billing)

2.3 Job Seeker Pages

- **Dashboard:** Overview, Matches, AI Insights, Applications Summary.
- **Projects/Jobs:**
 - Job Feed (Search & Filter)
 - Job Details
 - Saved Jobs

- **Applications:**
 - Application List
 - Application Status Details
- **Resume/Portfolio:**
 - Resume Builder
 - Resume Analysis Report
 - Portfolio Management
- **AI Career Advisor:**
 - Skill Gap Analysis
 - Interview Preparation
 - Career Roadmap

2.4 Employer/Recruiter Pages

- **Employer Dashboard:** Hiring Pipeline, Active Jobs, Top Candidates.
- **Job Management:**
 - Create/Edit Job
 - Job List (Active, Draft, Archived)
 - Job Performance Analytics
- **Applicant Management (ATS):**
 - Applicant List per Job
 - Candidate Profile View
 - Interview Scheduling
- **Company Profile:**
 - Branding & Details
 - Team Management

2.5 Admin Pages

- **Admin Dashboard:** Platform Health, Growth Metrics.
- **User Management:** Search, Edit, Suspend Users.
- **Company Management:** Verification Queue, Management.
- **Content Moderation:** Flagged Jobs, Flagged Profiles.

- **Audit Logs:** System Activity Tracking.
- **Feature Flags:** Configuration Management.

3. Complete Navigation Architecture

Jovia utilizes a multi-layered navigation system to balance depth and accessibility.

3.1 Global Navigation (Top/Side Bar)

- **Position:** Fixed Sidebar (Desktop) / Bottom Bar (Mobile).
- **Elements:** Logo (Home), Dashboard, Jobs/Projects, Messages, Notifications, Profile Avatar (Settings/Logout).

3.2 Contextual Navigation (Sub-menus)

- **Jobs Section:** Search, Saved, Applied.
- **Employer Section:** My Jobs, Applicants, Company Profile.
- **Settings Section:** Profile, Security, Billing, Notifications.

3.3 Quick Action Navigation

- **Command Palette (Cmd/Ctrl + K):** Global search for pages, jobs, or candidates.
- **Floating Action Button (FAB):** “Apply Now” (Job Seeker) or “Post Job” (Employer) on relevant screens.

3.4 Breadcrumbs

- Displayed on all nested pages (e.g., `Jobs > UI Designer > Application`) to provide clear hierarchy and easy navigation back.

4. Complete Component Library

The component library follows Atomic Design principles, ensuring reusability and consistency.

4.1 Atoms (Basic Elements)

- **Buttons:** Primary, Secondary, Ghost, Danger, Loading State.
- **Inputs:** Text, Password, Email, Search (with icon).

- **Selectors:** Checkbox, Radio, Switch, Dropdown.
- **Typography:** H1-H4, Body, Small, Caption labels.
- **Icons:** Lucide/Heroicons (Outline style).
- **Badges:** Status (Success, Warning, Error, Info), AI Match Score.

4.2 Molecules (Groups of Atoms)

- **Form Fields:** Label + Input + Error Message.
- **Search Bar:** Input + Search Icon + Clear Button.
- **User Avatar:** Image + Status Indicator + Name.
- **Card Header:** Title + Subtitle + Action Icon.
- **Breadcrumbs:** List of links with separators.

4.3 Organisms (Complex Sections)

- **Job Card:** Title, Company, Location, Salary, Skills, AI Score, Save Button.
- **Navigation Sidebar:** Logo, Nav Links, User Profile Summary.
- **Data Table:** Header, Rows, Pagination, Sorting Controls.
- **AI Insight Card:** Recommendation text + Confidence Score + “Why?” explanation.
- **Modal/Dialog:** Header, Body, Footer with Actions.

4.4 Templates & Pages

- **Dashboard Template:** Sidebar + Top Bar + Grid Layout for Widgets.
- **Feed Template:** Filter Sidebar + Main Scrollable List.
- **Detail Template:** Main Content Area + Sidebar for Actions/Meta-data.

5. Design Tokens

Design tokens are the “Single Source of Truth” for all visual variables.

Category	Token Name	Value / Description
Colors	color-primary	Requires Owner Input
	color-secondary	Requires Owner Input
	color-neutral-[50-900]	Black, White, and Grayscale scale
	color-success, color-warning, color-danger, color-info	System state colors
Typography	font-family-base	Inter
	font-size-[xs, sm, base, lg, xl, 2xl, 3xl, 4xl]	12px to 48px scale
	font-weight-[regular, medium, semibold, bold]	400, 500, 600, 700
Spacing	spacing-[1-24]	Multiples of 4px (4px to 96px)
Radius	radius-[sm, md, lg, full]	Requires Owner Input
Shadows	shadow-[sm, md, lg]	Requires Owner Input (Subtle elevation)
Breakpoints	breakpoint-[mobile, tablet, laptop, desktop, ultra]	Requires Owner Input
Motion	duration-[fast, base, slow]	100ms, 200ms, 300ms
	easing-base	Cubic-bezier(0.4, 0, 0.2, 1)

6. Responsive Design Specification

Jovia follows a **Mobile-First** strategy, ensuring core functionality is accessible on all devices.

- **Adaptive Layouts:**
 - **Mobile (< Breakpoint-Tablet):** Single column layout, bottom navigation bar, full-width cards.

- **Tablet (Breakpoint-Tablet to Breakpoint-Laptop):** Two-column layout for dashboards, sidebar becomes collapsible.
- **Desktop (> Breakpoint-Laptop):** Multi-column layouts, fixed sidebar, full feature set visible.
- **Component Adaptation:**
 - Tables convert to list views on mobile.
 - Navigation menus collapse into a “Hamburger” or bottom bar.
 - Modals become full-screen drawers on mobile.
- **Grid Behavior:** 4 columns (Mobile), 8 columns (Tablet), 12 columns (Desktop).

7. Accessibility Specification (WCAG)

Jovia is committed to **WCAG 2.2 AA** compliance to ensure the platform is usable by everyone.

- **Perceivable:**
 - Text alternatives (Alt text) for all non-text content.
 - High contrast ratios (minimum 4.5:1 for normal text).
 - Clear focus indicators for keyboard navigation.
- **Operable:**
 - Full keyboard accessibility for all interactive elements.
 - No content that causes seizures (avoiding rapid flashing).
 - Sufficient time for users to read and interact with content.
- **Understandable:**
 - Predictable navigation and interface behavior.
 - Input assistance (clear error messages and suggestions).
 - Consistent labeling across the platform.
- **Robust:**
 - Clean, semantic HTML to support screen readers and assistive technologies.
 - ARIA labels and roles where necessary.

8. Motion & Interaction System

Motion in Jovia is functional, subtle, and enhances the premium feel without causing distraction.

- **Micro-interactions:**
 - **Hover States:** Subtle color shifts or slight elevation (shadow) changes.
 - **Active/Pressed States:** Visual feedback when a button or link is clicked.
 - **Loading States:** Skeleton loaders for content areas; spinners for small actions.
- **Transitions:**
 - **Page Transitions:** Fade-in with slight vertical slide (200ms).
 - **Modal Entry:** Scale-up or slide-up from bottom (300ms).
 - **Drawer Entry:** Slide-in from side (300ms).
- **Easing:** Standard ease-in-out for most transitions to feel natural.
- **Reduced Motion:** Support for `prefers-reduced-motion` media query to disable non-essential animations.

9. AI Experience Design

Jovia is an **AI-First** platform, making intelligence a core part of the user interface.

- **Explainable AI (XAI):**
 - Every AI-generated recommendation includes a “Why?” tooltip or badge.
 - Match scores are broken down (e.g., “90% Match: High Skill Overlap, 5+ Years Experience”).
- **AI Assistant Interface:**
 - Floating chat interface for natural language queries.
 - Context-aware suggestions (e.g., “Improve your summary” on the profile page).
- **Confidence Indicators:** Visual cues (colors or progress bars) showing the AI’s confidence in a particular match or insight.
- **Human-in-the-Loop:** Clear ways for users to provide feedback on AI results (“Correct” / “Incorrect”) to improve future matching.

10. Search Experience Design

The search experience is powered by a **Hybrid Engine** (Keyword + Semantic + Vector).

- **Search Bar Features:**
 - **Autocomplete:** Real-time suggestions for job titles, skills, and companies.
 - **Recent Searches:** Quick access to previous queries.

- **AI Query Expansion:** Automatically including related terms (e.g., searching for “Frontend” also looks for “React, Vue, CSS”).
- **Filtering & Sorting:**
 - **Smart Filters:** Dynamic filters based on search results (e.g., specific skills found in the results).
 - **AI Ranking:** Results are sorted by a combination of relevance and personalized AI match score.
- **Results Display:**
 - Highlighting matching keywords in snippets.
 - Quick preview of job details without leaving the search page.

11. Dashboard Specifications

Dashboards provide a high-level view of the most critical information for each user role.

11.1 Job Seeker Dashboard

- **Goal:** Answer “What’s new?”, “What to do next?”, and “What’s my best opportunity?”
- **Widgets:**
 - **Matching Feed:** Top 3 job matches of the day.
 - **Application Tracker:** Status of recent applications.
 - **Skill Growth:** Progress toward recommended skills.
 - **AI Career Insight:** A daily tip or career recommendation.

11.2 Employer Dashboard

- **Goal:** Manage hiring pipeline and job performance efficiently.
- **Widgets:**
 - **Hiring Funnel:** Visual breakdown of candidates at each stage.
 - **Urgent Actions:** Jobs with new applicants or pending interviews.
 - **Top Talent Alert:** Candidates with exceptionally high match scores.
 - **Job Performance:** Views vs. Applications for active posts.

12. Complete Wireframe Descriptions

These descriptions define the layout and content hierarchy for key screens.

12.1 Dashboard (Job Seeker)

- **Top Bar:** Global Search, Notifications, Profile Avatar.
- **Sidebar:** Navigation Links (Dashboard, Jobs, Messages, etc.).
- **Main Area (Grid):**
 - **Row 1:** Welcome Message + Quick Action (“Update Resume”).
 - **Row 2 (Left $\frac{2}{3}$):** “Top Matches” list (Horizontal scroll or vertical list).
 - **Row 2 (Right $\frac{1}{3}$):** “AI Career Insight” card.
 - **Row 3 (Left $\frac{1}{2}$):** “Recent Applications” table.
 - **Row 3 (Right $\frac{1}{2}$):** “Skill Progress” chart.

12.2 Job Search Feed

- **Sidebar (Left):** Filters (Location, Salary, Experience, Remote, AI Score).
- **Main Area:**
 - **Header:** Search Bar + Results Count + Sort Dropdown.
 - **List:** Vertical stack of Job Cards.
 - **Footer:** Pagination controls.

12.3 Job Details Page

- **Main Content (Left $\frac{2}{3}$):**
 - Header (Title, Company, Meta-data).
 - Job Description (Rich text).
 - Requirements & Responsibilities.
 - Company Info section.
- **Sidebar (Right $\frac{1}{3}$):**
 - **AI Match Widget:** Score + Breakdown + “Why you?” explanation.
 - **Action Buttons:** “Apply Now” (Primary), “Save Job” (Secondary).
 - **Similar Jobs:** Small list of related opportunities.

13. Platform Design Guidelines

To maintain architectural consistency and a premium feel, all design decisions must follow these rules:

1. **Strategy Before Execution:** Design flows based on user goals, not just features.
2. **Data Before Assumptions:** Use AI insights and analytics to guide UI changes.
3. **Security by Design:** Privacy settings and data protection must be clear and accessible.
4. **AI by Default:** Look for opportunities to enhance every interaction with AI.
5. **Customer First:** Prioritize ease of use and value for the end-user.
6. **Minimalism:** If an element doesn't add value, remove it.
7. **Consistency:** Use only components and tokens from the official library.
8. **Performance:** Design for speed; use skeleton loaders and optimized assets.

Note: Specific design tokens (Hex codes, Radii, Shadows, Breakpoints) are currently marked as **Requires Owner Input** and will be finalized once provided.
